patterns

take-examine-move-loop.md

Agent takes an item, examines it, puts it back, and repeat.

Evidence: Iter 0: train: 00, 02 | Iter 1: train: 01 | Iter 2-4:
train: 02 persists; 00/01 show recovery from loops

multi-operation-loop.md

Cycles actions on same item without checking completion.

Evidence: Iter 2: train: 22, 24 | Iter 3-4: train: 24 persists

break-repetition-loop

PURPOSE.md

Created as **break-repetition-loop**. Previous attempt **goal-directed-action** was rejected for being too abstract. This version is more concise and uses concrete action patterns.

SKILL.md

Trigger: Apply the skill whenever the agent is about to repeat an action.

Rule: *Never Return an Item to Its Origin Location*

- **Failing:** take clock from desk -> examine -> move clock to desk

- **Successful:** take clock -> go to shelf -> move clock to shelf

Rule: *Agents that DO take items and perform operations often get stuck repeating the same operation. Each Operation Type ONCE Per Item*

Anti-Pattern: Take -> Operate -> Move -> Take (INFINITE CYCLE)

- **Fix:** After completing take -> operate -> move ONCE, do NOT repeat.
